

Carboys Designed With Experts In Mind

Here are a few reasons why our carboys are sought out by serious beer and wine-makers.

The Cleanest Carboys Possible

- › No ribs on the sides make the carboy easier to clean. There is no sediment or yeast on the walls to affect the fermentation process.
- › The thick walls that make this possible also ensure a sturdier product.
- › It is safer than a glass carboy. It will not break if dropped.

Not For Unwelcome Guests (Like Bacteria)

- › The plastic has no BPA. It is food-grade, so there is no taste or odour. It is impermeable to oxygen.
- › The flat base is easier to clean as well.
